

Taha Mert Gökdemir

Software Engineer (C/C++)

Email: taha.m.gokdemir@gmail.com | **Phone:** +90-554-747-6997

Location: İstanbul, Turkey | **GitHub:** tahameg | **LinkedIn:** /in/taha-mert-gokdemir/

Professional Summary:

Senior Software Engineer specializing in C/C++ for mission-critical, real-time simulation and avionic systems. Proven track record in developing high-performance applications compliant with stringent safety standards like DO-178C. Expertise in low-level graphics (Vulkan/OpenGL), systems programming, and architecting scalable, cross-platform software solutions.

Experience

Software Engineer

Havelsan | March 2025 – Present | İstanbul, Turkey

Got rehired to develop safety-critical avionic software for a strategic national project aimed at increasing Turkey's technological independence. Responsible for designing and implementing systems compliant with the highest aviation software standards.

Tech Stack: C/C++, OpenGL, Vulkan, Apex, Posx, Arinc-653

Qualifications: Do-178c DAL-A, Do-330 TQL-5

Software Engineer

Self-Employment | August 2024 – March 2025 | Muğla, Turkey

Following the closure of Born Immersive, operated as an independent consultant, successfully securing and delivering on two software development contracts for London-based clients within six months.

Software Engineer

Born Immersive | June 2023 – August - 2024 | London, UK

As a Senior Software Engineer, I specialize in C/C++ development for high-performance simulation applications and backend services.

- Contributed to the company's flagship product, ActiveMatter, a real-time XR simulation platform for hard-skill training.
- Contributed as a senior engineer until the company ceased operations in August 2024.

Tech Stack: C++, C#, OpenGL, Vulkan, POSIX, Sockets, Parallel Programming

Software Engineer

Havelsan | February 2022 – June 2023 | İstanbul, Turkey

Worked in the Advanced Technologies Department with a focus on C/C++ development for real-time simulation systems.

- Developed strategical planning and visualization systems for military-grade usecases. This brought revolutionary and cutting-edge strategical planning capabilities to the company and the military.

Tech Stack: C, C++, C#, Sockets (TCP/UDP), Parallel Programming

Software Engineer

C Tech Information Technologies Industry and Trade Inc. | April 2021 – February 2022 | İstanbul, Turkey

Focused on data transmission and visualization solutions for military-grade communication systems.

- Contributed to the Ka band and Ku band data transmission system projects.
- Developed high-level data distribution systems that communicate with low-level hardware.
- Developed a GUI framework for visualizing data from low-level hardware, enabling real-time monitoring and control.

Tech Stack: C++, RTOS, Linux System Programming, pthreads, POSIX Sockets, Python, REST, Vue.js

Software Developer

Soar Robotics | November 2019 – April 2021 | İstanbul, Turkey

Focused on **C/C++ development** for drone simulations and communication systems.

- Developed photo-realistic air and ground robot simulations.
- Led and managed the project Simulair which is a distributed simulation system for robot simulations.

Tech Stack: C++, TCP/UDP Sockets, ROS, SUMO, Veins, NS2, AWS

Software Developer(Part-Time)

WalkOVR | October 2018 – August 2019 | İstanbul, Turkey

Focused on C/C++ development for motion systems with cross-platform driver and sdk development.

Tech Stack: C++, Sockets

Education

Bachelor of Science in Electrical Engineering

İstanbul Technical University | 2016 – 2020 | İstanbul, Turkey

- **Final Thesis:** Developing a Tool with Python for EEG Data Analysis
-

Courses

C Programming Course

Institute: Necati Ergin - 200 hours of comprehensive training on C programming.

C++ Programming Course

Institute: Necati Ergin - ~200 hours of comprehensive training on C++ programming.

Languages

Turkish: Native

English: - Overall IELTS Score of 7.0

Other Technologies & Frameworks

Below are other technologies I have had a chance to work with during my professional and hobby projects:

Languages: Python, C#, JavaScript

Embedded Systems: FreeRTOS, Embedded Linux, STM32

DevOps & VCS: Git, GitHub, Jenkins, GitHub Actions

Backend & Web: ASP.NET, REST, Flask, Microservices, Vue.js

XR & Robotics: Unity (XRITK, MRTK), OpenXR, Hololens 2, ROS, ROS2
